Greenhouse Gas (GHG) Emissions (tonne CO_2e)

Year	Scope 1 Emissions	Scope 2 Emissions
2021	932	3,764
2022	969	3,918
2023	958	3,583
2024	988	3,618

■ Scope 1 Emissions   ■ Scope 2 Emissions

Carbon Intensity (kg CO_2e/TEU)

Year	Carbon Intensity
2021	25.09
2022	24.00
2023	23.94
2024	20.54

Remarks:

1. Scope 1 Emissions (tonne CO_2e) is the GHG emissions from sources that are owned or controlled by the port.

2. Scope 2 Emissions (tonne CO_2e) is the GHG emissions from the generation of purchased electricity, steam, heat and cooling.

3. Carbon Intensity (kg CO_2e/TEU), is the total of Scope 1 and Scope 2 GHG Emissions divided by the port's annual throughput.

4. The emission factors applied for the calculation of Scope 1 are adopted from the U.S. Environmental Protection Agency and Department for Environment, Food, and Rural Affairs (UK).

5. The emission factors applied for the calculation of Scope 2 GHG Emissions are adopted from the International Energy Agency.
