

**Remarks:**

- 1. Scope 1 Emissions (tonne CO<sub>2</sub>e) is the GHG emissions from sources that are owned or controlled by the port.
- 2. Scope 2 Emissions (tonne CO<sub>2</sub>e) is the GHG emissions from the generation of purchased electricity, steam, heat and cooling.
- 3. Carbon Intensity (kg CO<sub>2</sub>e/TEU), is the total of Scope 1 and Scope 2 GHG Emissions divided by the port's annual throughput.
- 4. The emission factors applied for the calculation of Scope 1 are adopted from the [U.S. Environmental Protection Agency](#) and [Department for Environment, Food, and Rural Affairs \(UK\)](#).
- 5. The emission factors applied for the calculation of Scope 2 GHG Emissions are adopted from the [International Energy Agency](#).
